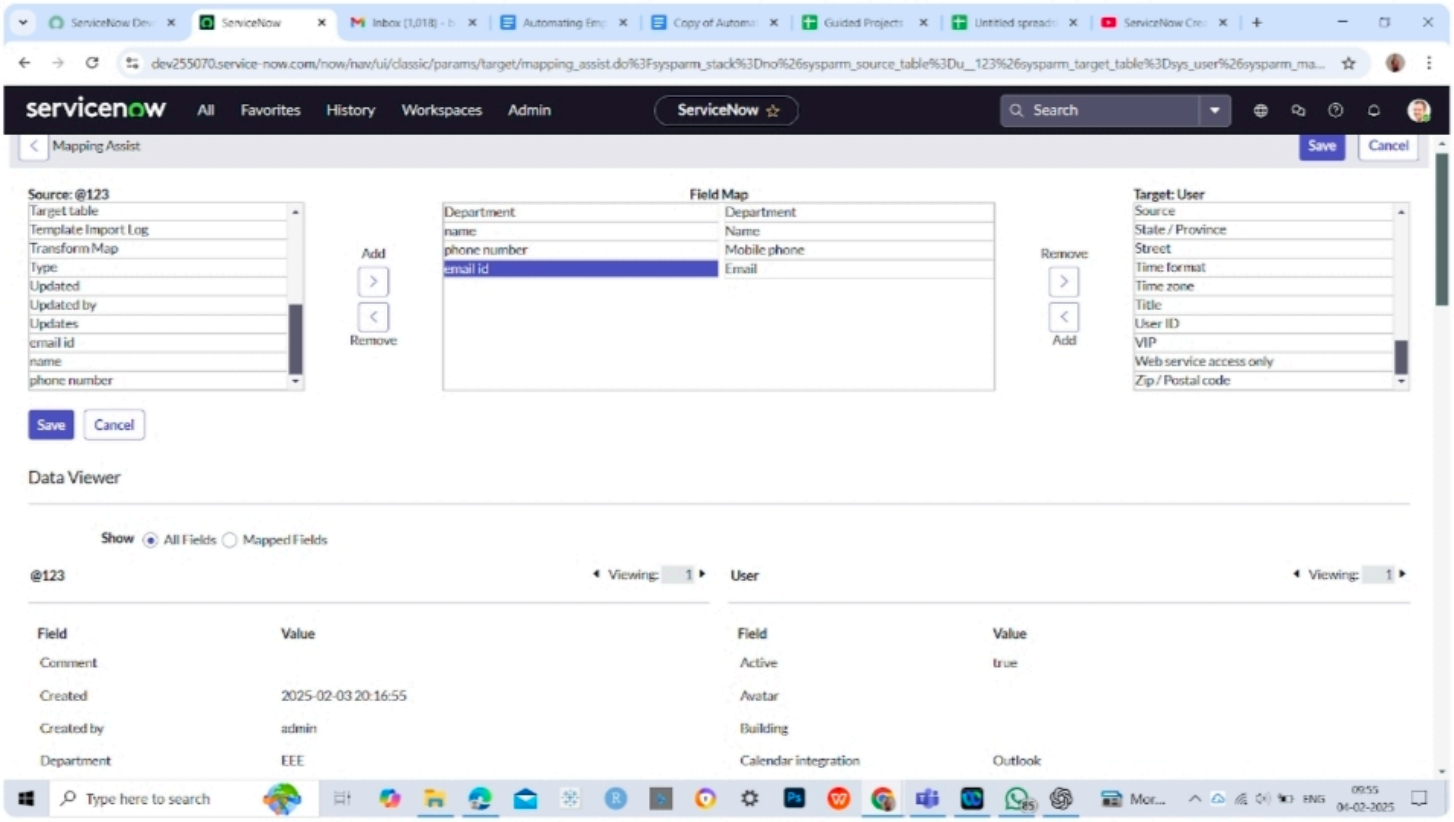
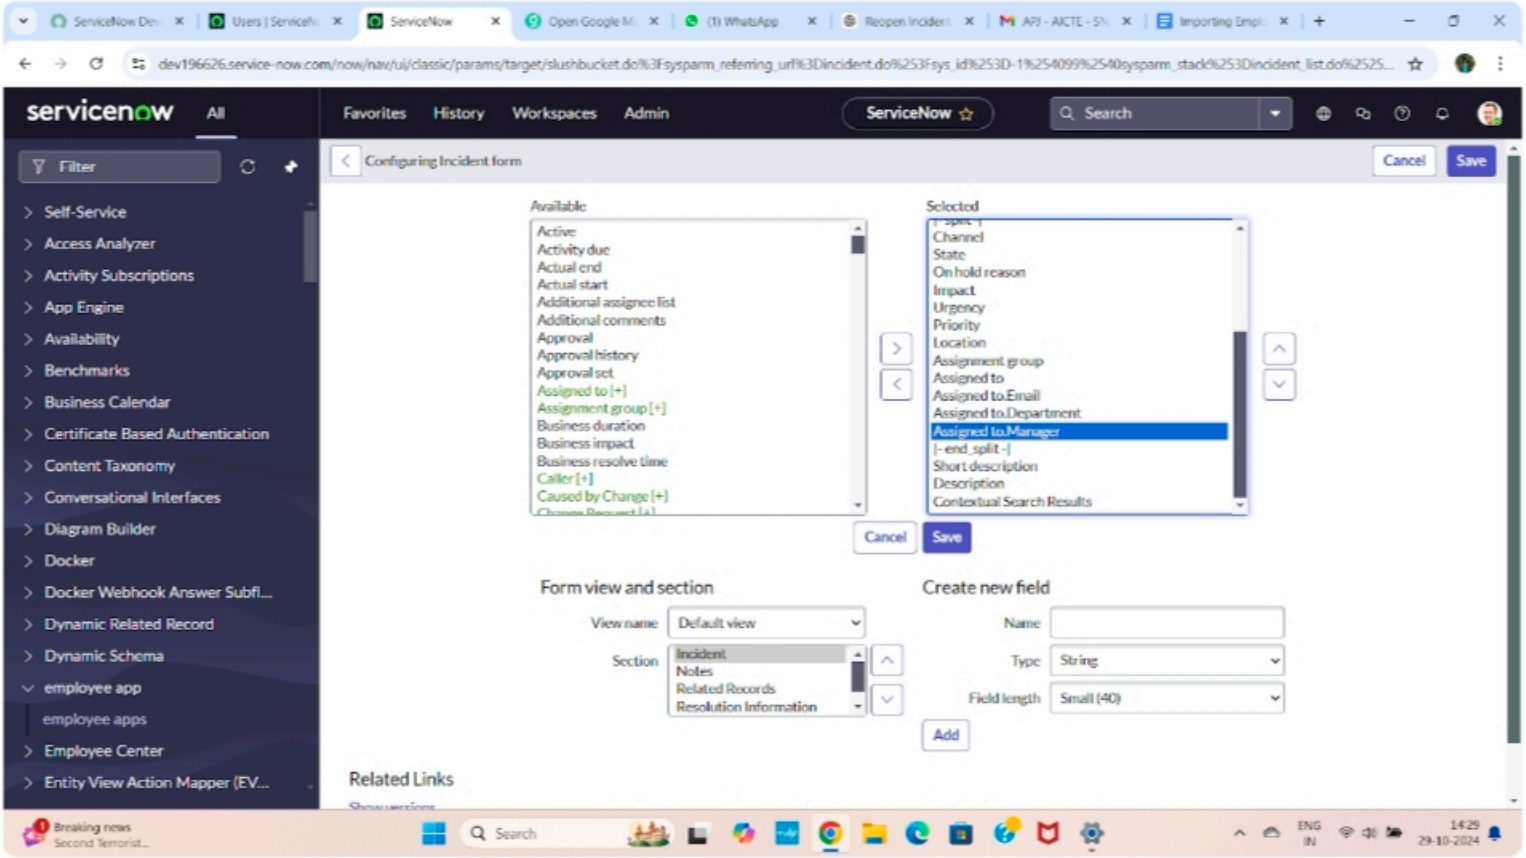
2. Click on All >> incident
3. Select create new under incidents
4. There is no field like department in the form
5. Email and manager fields are not visible
6. By using dot walking retrieve the data without opening the record
7. Click on context menu go to configure and select form layout
8. Select assigned to.department as mentioned below
9. Click on save
10. Add another field assignment.email.
11. Also add assignment.manager field
12. Click on save.





13. Open an incident form

14. Fill the mandatory fields and assigned to just imported user

15. Then department and email field is automatically filled

1. Open the New incident form.
2. Insert the assigned to field, then automatically it will update the email, department and manager.

This project demonstrates how to efficiently import external employee data into ServiceNow using Import Sets and Transform Maps while maintaining proper data relationships. By mapping reference fields such as department and manager correctly, structured and reliable records are created in the system.

Using dot walking on the Incident form further enhances usability by automatically displaying related information like department, email, and manager without manually opening the user record. Overall, the solution improves data accuracy, reduces manual effort, and ensures seamless relationship mapping across tables.
